

Multix

Multipurpose Website CMS with Codeigniter

- Author: phpscriptpoint
- Author Portfolio: [Omkar \(https://omscripts.co/\)](https://omscripts.co/)
- Support Email: [Omkar \(https://omscripts.co/\)](https://omscripts.co/)

Introduction

Multix is a responsive, user-friendly and easy-to-use content management system that is built with the popular Codeigniter framework. Using this CMS, you can easily build a nice, modern and clean website that have almost all the pages like team member, about, service, portfolio, news, event, contact etc. You can build education website, lawyer website, gym and fitness website etc. what you want to do.

This CMS is developed using the popular PHP framework Codeigniter. So, it can be easily customized by other programmers. Developers will be able to alter the source code easily and can modify the database and files if needed.

[Welcome](#)

This script/CMS is strong against most vulnerabilities on the web like SQL injection attack, XSS attack etc. Also admin level security is implemented wherever necessary.

Features

This CMS has some awesome features. We are giving those below:

1. Easy and simple interface
2. Fully responsive
3. Clean codes
4. Direct access stopped for page
5. Invalid url protected for page
6. Data statistics in dashboard
7. Complete Multi-language system for both static and dynamic data
8. Unlimited Color Options
9. Manage team members by admin
10. Manage portfolios by admin
11. Manage testimonials by admin
12. Manage services by admin
13. Manage photo gallery by admin
14. Manage meta title, keyword and description for all pages
15. Manage news and categories by admin
16. Manage events by admin
17. Manage pricing tables by admin

18. Easy installation on server
19. Forget password option for admin panel
20. Email setup option by admin
21. Secured against SQL, XSS etc. attack
22. Preloader on/off system to control page speed
23. RTL Support
24. Dynamic page add option
25. Tawk Live Chat Option

Requirements

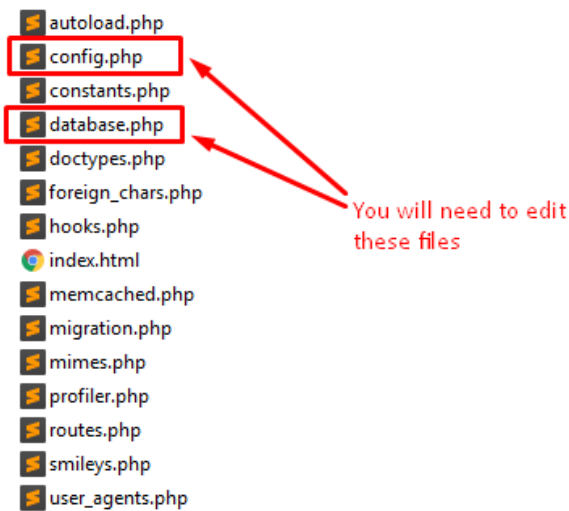

Following modules must be activated on your server:

1. PHP version: 7.4 or higher
2. PDO Extension
3. fileinfo Module
4. GD Library
5. cURL
6. allow_url_fopen
7. Mbstring

Installation

In order to install the CMS, please follow these steps:

1. Unzip the file you download from Envato.
2. Search for the folder cms in the main script folder that you have downloaded.
3. Now upload the cms folder into your server using FTP.
4. Alternately you can zip the cms folder and upload it to server via cpanel. Then extract this and use.
5. You can use our cms into root domain or subdomain.
6. Become sure that you have uploaded the .htaccess file correctly. When you will extract the zip file staying on server via cpanel, the .htaccess file may not be extracted properly in the server and then the script will show error. So after extracting, you may have to manually upload the .htaccess file into the server that comes with the script file.
7. Create mysql database using cpanel or your hosting provider's system. Then import the multix.sql file (that you got into the script's database folder) into your created database.
8. Now you will have to setup the config and database file. If you are famlier with codeigniter, you should know about it. But don't worry! We will tell step by step.
9. Go to the cms folder, then application and then config folder.
10. You will get two files config.php and database.php

11. Open up these files with any text editor (for example: notepad++).
12. In config.php file, setup your timezone:
13. Change the indicated values of photos like this:

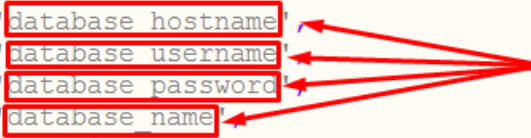

```
10 | WITH a trailing slash:
11 |
12 | http://example.com/
13 |
14 | WARNING: You MUST set this value!
15 |
16 | If it is not set, then CodeIgniter will try guess the protocol and path
17 | your installation, but due to security concerns the hostname will be set
18 | to $_SERVER['SERVER_ADDR'] if available, or localhost otherwise.
19 | The auto-detection mechanism exists only for convenience during
20 | development and MUST NOT be used in production!
21 |
22 | If you need to allow multiple domains, remember that this file is still
23 | a PHP script and you can easily do that on your own.
24 |
25 | */
26 | date_default_timezone_set('America/New York');
27 | $base_url = ((isset($_SERVER['HTTPS']) && $_SERVER['HTTPS'] == "on") ? "https" : "http");
28 | $base_url .= "://" . $_SERVER['HTTP_HOST'];
29 | $base_url .= str_replace(basename($_SERVER['SCRIPT_NAME']), "", $_SERVER['SCRIPT_NAME']);
30 | $config['base_url'] = $base_url;
31 |
32 | /*
33 | -----
34 | Index File
35 | -----
36 |
37 | Typically this will be your index.php file, unless you've renamed it to
38 | something else. If you are using mod_rewrite to remove the page set this
39 | variable so that it is blank.
40 |
41 | */
42 | $config['index_page'] = 'index.php';
43 |
```

14. In database.php file, make these changes:
15. Change the indicated values of photos like this:

```

67 | The $active_group variable lets you choose which connection group to
68 | make active. By default there is only one group (the 'default' group).
69 |
70 | The $query_builder variable lets you determine whether or not to load
71 | the query builder class.
72 */
73 $active_group = 'default';
74 $query_builder = TRUE;
75
76 $db['default'] = array(
77     'dsn' => '',
78     'hostname' => 'database hostname',
79     'username' => 'database username',
80     'password' => 'database password',
81     'database' => 'database name',
82     'dbdriver' => 'mysqli',
83     'dbprefix' => '',
84     'pconnect' => FALSE,
85     'db_debug' => (ENVIRONMENT !== 'production'),
86     'cache_on' => FALSE,
87     'cachedir' => '',
88     'char_set' => 'utf8',
89     'dbcollat' => 'utf8_general_ci',
90     'swap_pre' => '',
91     'encrypt' => FALSE,
92     'compress' => FALSE,
93     'stricton' => FALSE,
94     'failover' => array(),
95     'save_queries' => TRUE
96 );

```

Change these values

Admin Panel Login

In order to login to the admin panel, go to the url below:

<http://www.yourwebsite.com/admin>

Here "yourwebsite" is your main domain name. Just after your main url, you have to put "admin" and that's it.

Default Admin Login Credentials are:

Email: admin@gmail.com

Password: 1234

Email Setting

In order to run the script without problem, you have to set up the email (with SMTP) properly. So, from the admin panel, go to **Settings > Email**. Change the information given there according to your requirements.

Update Information

Update History

You will get all the details about an update in this section:

Version 3.0

Overall Changes:

- Made the script compatible for php 8+
- Fixed the flash message problem for php 8+

Changed Files:

- Changed the total codeigniter system files. Codeigniter 3.1.13 is used. So I suggest you to replace the full new script.

Version 2.4

Overall Changes:

- Floating share api fixed
- Organized the controller codes
- Fixed the news page language bug

Changed files:

- public/css/style.css
- application/config/config.php
- application/models/Model_news.php
- application/views/view_header.php
- application/views/view_news_detail.php
- application/controllers/Contact.php
- application/controllers/Home.php
- application/controllers/Newsletter.php
- application/controllers/Portfolio.php
- application/controllers/Service.php
- application/controllers/admin/Captcha.php
- application/controllers/admin/Category.php
- application/controllers/admin/Client.php
- application/controllers/admin/Comment.php
- application/controllers/admin/Event.php
- application/controllers/admin/Faq.php
- application/controllers/admin/Feature.php
- application/controllers/admin/File.php
- application/controllers/admin/Footer_setting.php
- application/controllers/admin/Forget_password.php
- application/controllers/admin/Lang.php
- application/controllers/admin/Menu.php
- application/controllers/admin/News.php
- application/controllers/admin/Page_about.php
- application/controllers/admin/Page_contact.php
- application/controllers/admin/Page_dynamic.php
- application/controllers/admin/Page_event.php
- application/controllers/admin/Page_faq.php
- application/controllers/admin/Page_home.php
- application/controllers/admin/Page_news.php
- application/controllers/admin/Page_photo_gallery.php
- application/controllers/admin/Page_portfolio.php
- application/controllers/admin/Page_pricing.php
- application/controllers/admin/Page_privacy.php
- application/controllers/admin/Page_search.php
- application/controllers/admin/Page_service.php
- application/controllers/admin/Page_team.php

- application/controllers/admin/Photo.php
- application/controllers/admin/Portfolio_category.php
- application/controllers/admin/Portfolio.php
- application/controllers/admin/Pricing_table.php
- application/controllers/admin/Profile.php
- application/controllers/admin/Reset_password.php
- application/controllers/admin/Service.php
- application/controllers/admin/Setting.php
- application/controllers/admin/Slider.php
- application/controllers/admin/Social_media.php
- application/controllers/admin/Subscriber.php
- application/controllers/admin/Team_member.php
- application/controllers/admin/Testimonial.php
- application/controllers/admin/Why_choose.php

Version 2.3

WHAT WE DID IN THIS UPDATE:

- Added youtube option to ckeditor

Changed Files:

root > public > admin > ckeditor > config.js

Added Folder:

root > public > admin > ckeditor > plugins > youtube

Version 2.2

WHAT WE DID IN THIS UPDATE:

- Added Tawk Live Chat Option

Changed Files:

root > applications > controllers > admin > Setting.php

root > applications > views > admin > view_setting.php

root > applications > views > view_footer.php

Added Table Rows:

tbl_settings (Items added: "tawk_live_chat_code", "tawk_live_chat_status")

Version 2.1

WHAT WE DID IN THIS UPDATE:

- Fixed the subject field small bug in the home page booking or quick contact form.

Changed Files:

root > application > controllers > Home.php

root > application > views > view_home.php

Version 2.0

BE CAREFUL when you will install this update! This is a big release. If you can not install the files correctly, the script will not work. Lots of files and database tables are changed here.

WHAT WE DID IN THIS UPDATE:

- Complete multilanguage integrated (you can now translate with dynamic data for table fields)
- RTL option added for language that have right direction
- Preloader on/off added in setting
- Dynamic page add option
- No need to setup the base url now. It will be picked automatically by the script.

Changed Files:

public > css > style.css

root > application > views > view_service_detail.php
root > application > views > view_portfolio_detail.php
root > application > views > view_header.php
root > application > views > view_footer.php

Added Database Tables:

tbl_setting_captcha
tbl_captcha

Version 1.7

1. Social Media Contoller minor bug fixed.
[Changed file: "application > controllers > admin > Social_media.php"]
2. Made the default language to English in database.

Version 1.6

Front End Menu show and hide option is added to the admin panel.

Added Files:

controllers > admin > Menu.php
models > admin > Model_menu.php
views > admin > view_menu.php

Modified Files:

view > view_header.php
views > admin > view_header.php

Added Tables:

tbl_menu

Version 1.5

1. Made the language option easier. Admin can add, edit and delete language from admin panel easily.
2. Modified the database structure for language. Two tables added.
3. Added SMTP email configuration and added entry into database too.

Version 1.4

1. Added multi-language option using codeigniter default language system and removed the language table from the database.
2. Added toastr jquery animation for success and error messages in front end.
3. Fixed minor responsive issue in front end.

Version 1.3

1. Fixed the minor front end portfolio bug - fixed showing the single portfolio page meta information.
2. Edited the "view > view_header.php" and "model > Model_portfolio" files.

Version 1.2

1. Added file section (to upload media files like pdf, doc, xls, csv and photo in the server). From here media files can be copied and used in text editor easily.
2. Removed summernote editor and added ckeditor after customization.
3. Added new table for file into the database.

Version 1.1

1. Added front end controllers for terms and privacy page.
2. Added front end views for terms and privacy page.
3. Modified front end main css and responsive css files.

Version 1.0

Initial Release
