

FUNJA PAYMENT GATEWAY

This is a summarized description in the response to the inquiries which we received about the development of funja payment gateway from the implementing organization.

1.) What is the area of your business? Does your company have a website?

As for the start, the business will be operating and running in Uganda as whole country in cities and towns but we have in the consideration to be broadened even outside the country.

Yes we do have a website known as funja.ml where basically all the information about the payment gateway can be got from and as how the business should run after it has been fully developed and deployed in the country.

2.) What is your role in the company?

I 'am an Executive assistant in for the company.

3.) Are you looking for a ready to be used / white label solution or would you like to build and run your own payment gateway?

We wanted to build and run our own payment gateway, but also we are not quite sure of the already existing label solution if they are also quite good and secure, then we can put it under consideration and decide to implement those instead.

4.) Do you need the payment gateway for your own company or would you like to offer it to others as well?

The payment gateway we need is not for our company rather it's for other transactions and businesses in the community so as people are able to make their transaction through our gate way like water, electricity and other tax bills.

For us we are to be the owners and the management to be running and controlling the system.

- 5.) What type of industries / companies would use your payment gateway for payment processing in the latter case?

The business, industrial, medical, educational and all other business which do support electronic payment and banking, we want them to be able to be incorporated in the system and to run perfectly.

- 6.) Which geographical areas are you planning to operate the payment gateway in?

The payment will be running in towns and cities of Uganda like Kampala and all nearby cities close It.

- 7.) Have you arranged for the regulatory requirements in these areas and markets?

Yes, that has been covered so far.

- 8.) How big is your team and which roles have you covered?

The team is quite big, and it is divided into different sectors and departments each executing its duties accordingly like the CEO, Executive Assistant, product Manager, Human resource manager and other staff members.

- 9.) Do you have an estimation of the budget that can be allocated for the project?

Actually we don't, and that is the major concern we need to get from you after analyzing everything which will be needed to develop the payment gateway, then we are going to be waiting from you to inform us the total amount of cash , time and other requirements needed for the system to be developed and deployed successfully.

10.) Do you have a feature specification document or any other kind of documentation available to study?

NO, we don't have yet.

In addition to the above, we require that our payment gateway to have the ability to access different banks in our country so as people can be able to make transactions and pay by the use of bank option in addition to other payment methods that will be incorporated in our system. And also, that it should be able to make online transactions for instance for the like some who is shopping on Amazon, he/she can use it to pay for their goods.

Also, the payment gateway should be in capability to be expanded in the future so as to have the ability to add the recent software's and technologies that are trending in the system.

Finally, were leaving the door open for your advice, changes and modifications in which part of the system we can apply them, It will be highly appreciated in all aspects since you have been developing these systems for a long period of time and have got enough experience in them.

Thank you very much in advance!

Regards,

Bukenya Huzaiifa

Executive assistant
